manufacturer may use similar hardware aged for an EDV previously submitted, provided that the manufacturer determines that the previously aged hardware represents a worst case or equivalent rate of deterioration for all applicable emission constituents for durability demonstration.

$\$\,86.1840\text{--}01$ Special test procedures.

- (a) The Administrator may, on the basis of written application by a manufacturer, prescribe test procedures, other than those set forth in this part, for any light-duty vehicle or light-duty truck which the Administrator determines is not susceptible to satisfactory testing by the procedures set forth in this part.
- (b) If the manufacturer does not submit a written application for use of special test procedures but the Administrator determines that a light-duty vehicle or light-duty truck is not susceptible to satisfactory testing by the procedures set forth in this part, the Administrator shall notify the manufacturer in writing and set forth the reasons for such rejection in accordance with the provisions of §86.1848(a)(2).
- Manufacturers of equipped with periodically regenerating trap oxidizer systems must propose a procedure for testing and certifying such vehicles including SFTP testing for the review and approval of the Administrator. The manufacturer must submit its proposal before it begins any service accumulation or emission testing. The manufacturer must provide with its submittal, sufficient documentation and data for the Administrator to fully evaluate the operation of the trap oxidizer system and the proposed certification and testing procedure.
- (d) The provisions of paragraphs (a) and (b) of this section also apply to MDPVs.

[64 FR 23925, May 4, 1999, as amended at 65 FR 6864, Feb. 10, 2000]

§ 86.1841-01 Compliance with emission standards for the purpose of certification.

(a) Certification levels of a test vehicle will be calculated for each emission constituent applicable to the test

group for both full and intermediate useful life as appropriate.

- (1) If the durability demonstration procedure approved by the Administrator under the provisions of §§ 86.1823–01, 86.1824–01, or 86.1825–01 requires a DF to be calculated, the DF shall be applied to the official test results determined in §86.1835–01(c) for each regulated emission constituent and for full and intermediate useful life, as appropriate, using the following procedures:
- (i) For additive DF's, the DF will be added to the emission result. The sum will be rounded to the same level of precision as the standard for the constituent at full and/or intermediate useful life, as appropriate. This rounded sum is the certification level for that emission constituent and for that useful life mileage.
- (ii) For multiplicative DFs, the DF will be multiplied by the emission result for each regulated constituent. The product will be rounded to the same level of precision as the standard for the constituent at full and intermediate useful life, as appropriate. This rounded product is the certification level for that emission constituent and for that useful life mileage.
- (iii) For the SFTP composite standard of NMHC+NO $_{\rm X}$, the measured results of NMHC and NO $_{\rm X}$ must each be adjusted by their corresponding deterioration factors before the composite NMHC+NO $_{\rm X}$ certification level is calculated. Where the applicable FTP exhaust hydrocarbon emission standard is an NMOG standard, the applicable NMOG deterioration factor must be used in place of the NMHC deterioration factor, unless otherwise approved by the Administrator.
- (2) If the durability demonstration procedure approved by the Administrator under the provisions of §86.1823–01, §86.1824–01, or §86.1825–01, as applicable, requires testing of the EDV with aged emission components, the official results of that testing determined under the provisions of §86.1835–01(c) shall be rounded to the same level of precision as the standard for each regulated constituent at full and intermediate useful life, as appropriate.
